

## The SportReTiNA video toolkit

<https://sportretina.com>

The SportReTiNA (**S**port **R**eal **T**ime **a**NAlysis) toolkit is an on-the-go video analysis solution for your sports training. It utilises portable wireless cameras that can be placed in various locations on a sport court or pitch, with the multi-purpose attachments provided. Capture high frame rate video footage and high resolution images from multiple angles. The footage is available immediately to the coach or athlete on a tablet or laptop, and the whole system can be controlled from any portable device with a standard web browser.

### Quick and easy set up

The cameras can be attached to a range of surfaces and are powered by rechargeable batteries that last up to 6 hours. The kit contains various accessories and more can be easily purchased.

### A single hub to control the system

The cameras connect to the portable hub via wi-fi. The hub allows you to configure the cameras, synchronise your recordings and make your videos immediately available to view. It's also powered by a rechargeable battery.

### Control everything with your mobile phone

The hub can be controlled using any wi-fi-enabled portable device (e.g. a phone or tablet). There's no app to download, all you need is a web browser. Reposition the cameras, start and stop the recordings, and review footage that's just been captured.

### Hands-free recording; capture only the footage you need

Once everything is set up, you can put your mobile device away. You can simply control recording using the wrist remote included, which sends a wireless command to the hub. There are three modes that, when actioned, apply to all the cameras:

- 1) **manual**: one click to start recording, one click to stop
- 2) **single click**: records a specified amount of time (predetermined from your phone)
- 3) **past events**: press the button once and this will save the preceding x seconds (e.g. 15 seconds). This is the most useful mode, in our opinion, as it allows you to see an action before deciding whether you want to save it for further review.

## On-court instant video playback

Connect your laptop or tablet to the hub and instantly replay your captured videos using any web browser. Play videos in slow-motion, synchronise multiple views, and move back and forward frame by frame. Easily import the footage to your favourite app for annotations and drawings. You can also play your videos side by side with archived footage. If you have an internet connection, you can upload your videos directly to the cloud or onto your social media channels. You can even pull videos of your favourite players from social media channels such as YouTube or Instagram and compare your actions with theirs.

## Use the video analysis software provided or an app of your own

Review your videos with the software provided or download the files onto your PC to use with your favourite video analysis software. Watch the demo at <https://sportretina.com/demo/video-demo.php> and see what SportReTiNA's software interface can do. Keep visiting the page for details of the product's latest functionality as we're constantly adding features.

## Why not try our SportReTiNA web app? <https://sportretina.com/demo/demo.php>

Although still in its alpha stage, our SportReTiNA web companion app is very much usable and free to try. Accessible from any web browser, with no app to install, you can access any video on the web to play side by side with your own. We have a library of tennis video URLs from YouTube, Facebook and Instagram.

## The benefits of using SportReTiNA

- Portable and affordable
- Rechargeable, no need for mains power
- No need of internet access to capture footage
- Up to six synchronised cameras and three modes of recording
- Record past events
- Instant playback
- Remote and hands-free recording
- Upload videos directly to the web and share with peers
- Use your own cloud storage or our dedicated video portal

## What you get with the toolkit

- Two, three or four wireless cameras
- Portable hub to control the system
- Remote control for your wrist
- Accessories to attach cameras
- Slim carry case
- Free OTA system software upgrades
- Two-year access to the SportReTiNA web app
